APPROACH was a non-profit Peace and Brotherhood Programme publication published by Sagittarius Publishers PO Box 1953, Pretoria, South Africa

Complete sets of both the Volumes 1 and 2 are available at 18s. as long as stocks last. Our last issue will appear toward the end of next Month

THE SINGULAR RECIPE

ON APPROACH's first page we have tried to view practical questions and problems of life in the light of cosmic knowledge. In these our times of error, ignorance and danger the wisdom of all time, regained from ancient sources, is just the one thing we need. But while this true approach to life can be elucidated over pages on end, we may often feel: how can I keep all this constantly before my eyes? How can I keep it present in my mind so that when I need it most, on the spur of a moment I have it handy as a practical precept? Is there a walking-stick on which I can lean every day, a reliable prescription which will help me in any situation in which I may find myself in the course of my life?

We feel there is. Wise men of all ages have put the cosmic truth and the right approach in life in a nutshell, although each may have had his particular shell of words for it. Once upon a time when they questioned Master Jesus, he repeated the sentence which by then had already been an ancient precept: Thou shalt love thy God with all thy heart, with all thy soul & with all thy mind. He added that Thou shalt love thy neighbour as thyself. And almost as by way of amplification, though 500 years earlier, the Lord Buddha had put it this way: Not to do any evil, to cultivate the good, to purify one's mind, this is the teaching of the Buddhas (i.e. of the wise teachers of mankind).

These are the recipes, dear friend. Your whole life, all your conduct, your attitude, your principle approach, even a decision of expediency - check them, correct them, amend them under these sentences. Choose the one that suits your temperament. Lean on it whenever you are in need of guidance or support, it will never fail you. It is the Great Law itself you are depending on. If you follow it under those words, it will protect you wherever you are. But should you feel that even the sentences are still too long to remember, then compress them into the one word, TURN. Turn to the Father. Turn in loving kindness to your fellow-man. Turn away from evil, turn to the friendlier word, the kinder thought, the more selfless act, and turn to the healthier and purer way. Never flee! Make your stand with an even and valiant mind and know that the Cosmic Law is on your side.

This is the formula. There is no shorter one and neither a surer comfort, friends. - May Peace be with you All.

THE INDIVIDUAL's TASK

Writing about the service we owe to our fellow-men and this world, a friend quotes from the ancient manuscript 'The Voice of the Silence':- "The selfish devotee lives to no purpose. The man who does not go through his appointed work in life - has lived in vain. Follow the wheel of life; follow the wheel of duty to race and kin, to friend and foe, and close thy mind to pleasures as to pain. Exhaust the law of karmic retribution."

It is a truism that we gain for ourselves the more we serve others. Thinking of, and acting for the benefit of others makes us forgetful of our small and petty egos while our better nature within benefits by practice. In exercising these better qualities of our character, thus raising ourselves, we imperceptibly raise the general climate around us at the same time. This is the invisible but true service the individual is giving to the whole world.

World service then is not so much the joining of this or that "World Organization" & swelling the already existing armies of busy-bodies. It is rather the opposite: express your better & inner Self by doing quietly the duty of the day and drying the tear of the hour, in equanimity and compassion.

Help other men & the world by unfolding your inner man.

Theory, and Practice:

COSMIC FORCES, GRAVITY AND SPACE SHIP PROPULSION (II)

IN OUR first article we reviewed Ray Holden's, N.Z., concept of gravity which he sees as "possibly made up of many differing frequencies" of a heavy charge acquired by the heavenly body on its way through space. Space flight should therefore be possible ~~by~~ overcoming gravity through electrostatic energy. This energy he holds to be of a higher order than electromagnetic force.

We showed how closely Ray had approached the teachings of Ancient Science which says that all matter and all energy must be informed with a rising scale of ever higher movements. These movements & frequencies are to be classed as 'living'. They belong to and actually are the emanations of Conscious Entities (let us call them Gods), ever & ever higher up. We said, it is a wondrous thing now to note that in fact Man can make mechanical, practical use of these, to us simply natural and higher forces. For instance, we could "build a mother-ship & go a-visiting from star to star - all with the presence of living movements (forces) derived from Conscious Sources above".

Present-day, orthodox science would admit that here we deal with 'higher forces' but would still loathe to have to call them 'living'. Indeed, in toto, it would never acknowledge that they ARE aggregate Life Forces having passed through Conscious Beings of ever higher planes of existence. Yet in isolated instances there are scientists even today who do admit or are close to recognising the CONSCIOUS aspect of nature's "higher forces".

Our age's science will be unable to make any true progress unless it throws overboard its last vestiges of materialism & turns to viewing again - as did happier & more successful scientific ages long, long ago -

the material & energetical phenomena as mere precipitations out of the one Life Force as it filters ever downward in its incomprehensibly diversified movements yet some of them conveniently perceptible to our senses.

For further illustration let us now turn our gaze onto our own plane and farther below. We find that within the climates of our body worlds upon worlds of micro-organisms thrive in happy activity. For better or worse they are affected as soon as our emanations, our heat, our electrical, magnetic or emotional climates change. On the other hand, what difference is there in our using higher cosmic (i.e. Godly) forces for propulsion purposes of space ships,

Approach - February, 1960

and the skill of some parasite attaching itself to a red blood corpuscle and taking a jolly long ride through our system? It is a difference in worlds and in scale only, but not in principle. Apart from this, many a man would be sorely surprised to learn how many kinds of invisible yet 'living' forms are thriving in his emotional and psychic atmosphere, drawing from his inner life blood, waxing or waning from day to day.

So the One Life is not only manifold in forms expressed, it is so also in energies and forces, which are split up into many degrees and levels.

We may take another step and state that apart from the forms in the animal and vegetable kingdoms, who look upon Man as a 'god' & depend upon his good-will emanations so as to experience a happy existence in their turn, even so-called 'dead', inanimate things like minerals or metals are pervaded by or dependent of the filtered life emanations from Man. Not only jewels and gems do take on much of the radiations of their wearers but also creations of art or technical industry are being drenched by the - to them - higher life forces & movements flowing into them through the hands of their fashioners or users.

Why does a horse may become quite a different horse after having been sold to another man? Why does one piece of art, say a sculpture, contain more "life" than the other? Why does a certain motor cycle start to give trouble after having changed hands while it was a perfect machine with the previous owner? Now cycles & motor cars today are to a very great extent the products of highly mechanised installations. The possibility of their taking on much of the living forces of many men is comparatively limited, until at last they come into the hands of their more or less permanent owners. But let us think of railway engines or aeroplanes & ships, which are still undergoing a great deal of manual shaping in their production processes. Recall those stories you have read of ill-fate attaching to a particular ship and you will sense that there is more in all Approach - February, 1960

this than a mere superstition. Operators of machines are very much attached to such seemingly dead metallic creations. Sometimes they take what to others appears as excessive pains to keep them in first-class condition. Engine drivers, pilots & ships' captains have a very intimate relation to their vehicles which under their hands seem to acquire almost human qualities. Yet a loc driver who thus 'lives' with his engine will be a happier man for it and a successful driver who hardly ever meets with an accident. In this man's atmosphere the otherwise plain Loc No. so-&-so, property of some State Railways, becomes a living organism - and this in direct proportion to the driver's intensity of thinking & feeling & caring! Such an engine, of course, will never have a soul in the sense of an Ego or a divine monade. But it will, in the course of time & in the aggregate fields of its metallic atoms and forces, contain so much of its engineer's emanations that it becomes a 'personality' in its own right. It becomes responsive to this one man & the more it does so, the more 'jealous' this driver seems to become, a man who knows his engine inside-out & is very much afraid of anybody else's interference. The same with planes and with ships.

Before continuing let us return to the interesting point: why do particularly these vehicles catch the public's eye and fancy? Because of the fact that they are directly 'responsible' for the safe transport of many lives! So once again, drivers, pilots, captains, who day & night live in this responsibility, convey their own intensive emotional and mental life forces into the "life movements" of the lower-order inanimate matter of THEIR vehicles. They do this unconsciously yet to an extraordinarily high degree. And the more they do, the less will their vehicles let them down. The less even will they suffer from ordinary wear and tear.

To repeat then: all life forms on the great Jacob's Ladder not only MAY make use of the ever higher emanations & life frequencies, nay, they

HAVE to make use of them for their very existence, growth and development. Accordingly, we are perfectly at right, if we make use of higher natural and cosmic forces for our flying through space - if we know how to use them correctly.

If we know, how! On the basis of what we have said in these our comments, it stands to reason that any know-how will come to us only the more we open ourselves, in our consciousness, to the higher life movements and emanations. In other words, the more we ourselves develop in harmonious accord with ever higher forces, emanating down to us (as well as forth throughout all creation), the easier it will be for us to 'see' how these emanations can be put to mechanical use as well. The path to such attitude has often enough been described. It constitutes the relying more on intuition than on fact-collecting, more on recognising the inner cosmic workings than on clinging to the data of the outward, material phenomena. The more too, we think of cosmic forces along the lines as sketched above, the less shall we feel a necessity of making divisions & classes - like 'gravity' or 'electrostatic', etc. Our eyes, our perception will have widened and now comprehend the true position of cosmic interdependence.

Remains, lastly, to enter upon the practical considerations. We covered the ground to some extent when realising: that all energy, as well as all matter, are aggregate fields of movements embodying ever higher impulses! Now, just as we demand of ourselves that we open and unfold ourselves toward the higher realities which stream down upon & pervade us, thus 'conditioning' ourselves by making of ourselves more RESPONSIVE INSTRUMENTS for the higher life movements & forces - just the same would the responsiveness of organic or inorganic matter all around us on our plane, or even further down, depend on its 'conditioning' toward the movements of higher vibratory rates.

The process of conditioning in its turn is one

of emphasizing the amount of already existing higher vibrations within the particular object under exclusion or disregard of the balance of ever lower rate movements, or traits. It is a process of overcoming the lower frequencies by exercising, practising the higher ones, by thus raising the over-all, congenial vibratory rate flowing through the object. It is a process of refining, selecting, stressing, ennobling!

Good. And to what end? Toward ever better service! Thus the practical result of the conditioning process is one of wider service & enlarged instrumentality.

Conscious Man, able to select & discriminate, but foremost to condition himself toward higher frequencies by DELIBERATELY OFFERING HIS EVER PURER & EVER MORE SELFLESS SERVICES, experiences in this way unfoldment & true progress in every field. By refining himself, he can let flow through himself an ever increasing amount of the higher life emanations, thereby at the same time fashioning out of himself an ever better instrument in the hands of Higher Entities.

We, from our position within unconscious nature around us, do the same with other forms and beings. In animal husbandry, as well as in plant breeding, we consciously enhance the refining, ennobling process by selection, stressing the valuable traits, eliminating the lower factors - to what ends? Again toward raising the life forms to a higher stage of instrumentality, enabling them to render ever better service. (That this instrumentality and serviceability is exploited by us for selfish ends is a particular aspect of the matter which does not concern us at the moment.)

On the same basis we process minerals & refine metals to make of them ever better carriers of composite life energies. In artfully aggregating them, under consideration of required properties, we fashion them into ever more complicated instruments capable of dealing with the desired higher force fields. The lode stone is a primitive

magnet which yet served many generations of seafarers. Modern magnets have become the Non Plus Ultra in the refinement & composition of metals, and their service can no longer even be compared with what the lodestone had to do.

Well now then, just as Conscious Man is an instrument which, having been appropriately refined, can handle & master the higher cosmic forces, so it is not only conceivable that we can further process objects originally derived from the mineral kingdom to deal with higher forces, no, it is essential that we achieve this if we want to be able to put the higher forces to use in a mechanical device.

In other words, that one day we can handle higher charges of electrostatic energy than we do today, depends on our ability to further refine & process certain metals & to fashion them into proper instruments so that they will do the job required. That one day we can handle, or rather overcome gravity, depends on our putting into technical service refined and ennobled materials which our planet readily provides. And if we want to make use of free cosmic energy we shall have to develop such materials & to find the appropriate way of their combination, as will be responsive to it. The property of responsiveness to free cosmic energy must be imparted to them by our selecting & processing, refining & fashioning. We did the same with magnetic metal, or conductors of electricity. Once that responsiveness is achieved we are able to collect, conduct & generally use these free cosmic energies - no matter whether the sub-departments are labelled static, magnetic, gravitic or whatever else.

There are a few men who claim they have overcome gravity & are able to fly model flying saucers. We cannot go into their details here. There are men too, who claim to be able to make use of the free cosmic flow for health and other purposes. Those familiar with the one of Cheiro's books dealing with Mr Keely, or with the respective chapter in "Flying Saucers Have Landed", Approach - February, 1960

will have learned of a man who could make this cosmic energy run a big machine. But, as with most of the other claimants, Keely too could not divorce his personal instrumentality from the mechanical design. In his instance, it remained dependent of his starting & stopping it through the means of sound, emitted from his violin.

The aim is to develop an independent instrument, responsive by its selective material & the arrangement of its components, to the proper and required range of cosmic vibrational force, capable of storing or conducting the flow, as the case may be.

We know that the space people have such instruments. Do we have them too? As announced in the introduction to these two articles, we now will shortly report on a man, an American, who seems to have achieved something tangible.

Dr. MORAY's "RADIANT ENERGY"

An apparatus looking like a table radiogram of 30x26x14 in., connected to an aerial & properly earthed, supplying a bright light for dozens of 100 Watt bulbs, current for a heater, an iron & an electromotor or a couple of more appliances if needs be - this is the free cosmic energy receiving set of a near future! If mass produced, it might sell at 600 Dollars. It would make the householder, the tradesman, the mechanical workshop, the small industrialist independent of old-fashioned energy supplies.

Now what is this? Another hoax? A charlatan at work? Why is this instrument not yet available?

As far as photographs, documents & affidavits covering a period of almost 30 years can tell, the whole thing looks genuine enough. Dr T Henry Moray, of Utah, is no amateur or self-promoting layman but a reputable physicist who started his particular research over 40 years ago. He has not put forward any unproved claims. He never made promises to fly to the moon on a certain date as others have done, nor indulges in any

other doubtful practises. He runs his own laboratory with an expert staff. And that we are still engaged in expensive destruction work by the so-called harnessing of the atom while here free cosmic energy is already at our fingertips, this is one more of those pathetic instances where common sense progress, genius & true social responsibility are engaged in a struggle with vested interests and the dark forces of our globe!

Dr. Moray has been pressed, tricked & bluffed. He has been robbed of some of his patents by underhand machinations or open deed. They have tried anything from bribing to knocking him down in his laboratory & luring him to a ship in order to kidnap him. His life has been typically that of a great inventor: giving all to benefit mankind in general, stopped & impeded by the powerful few of this planet, suffering, being humiliated, almost put to death in return. And the most successful, single victory so far by those whose sole interest lies in preventing the realisation of such inventions like Dr. Moray's, has, of course, been the veil of silence thrown over this man's work & achievements. For all his genius & tangible success, this world could have been a better one for close to 30 years. In 1925 he told of his first results; his book "Beyond the Light Rays" was published in 1931. It was followed by a constant stream of documentary evidence of his work - all to no avail, all condemned to obscurity by the same class of scientists, of string pullers in high financial & industrial circles, of general doubters & disbelievers who are also, amongst other things, "dead against flying saucers". Despite hundreds of confirmations by innumerable witnesses & independent observers, amongst them experts & industrial leaders of quite a different calibre, the "Radiant Energy" principle & Moray's device for its practical application is just not accepted.

The theory & principle seems to be quite in ac-

cord with what we have said in our purview gone before. A different form of energy than magnetism or electricity, and obviously of much higher frequency ranges, is 'trapped' in a suitable 'receiving set' with (newly developed) valves, oscillators & condensers & thereby prevented from flowing back into the cosmic reservoir. Instead it is conducted through the inventor's circuits & the appliances added & thus made to do the work wanted. This includes, except driving mechanical equipment (with 50 to 60,000 Watts available in the table set mentioned above, alone!) the hardening of metals, their genuine transmutation, & also a highly successful therapeutic method. Dr. Moray has not yet talked about space flight but it stands to reason that with cosmic energy of this kind available for heavy duty work of all classes, especially in ships, for railway & aircraft propulsion, the development of a suitable antigravity device would be no unsurmountable problem. One of the characteristics in the energy-apparatus relationship is a "pulse" phenomenon with a corresponding "back-rush", almost as if this range of cosmic energy were coming in in phases or waves - which all makes one think of the "pulsating" light reported in so many of the saucer sightings.

Four million dollars are needed to establish RE on commercial lines - plus stamina, unending courage in the resulting fight with mankind's enemies & an inexhaustible faith in the help & patronage of higher universal, or, if you prefer, of heavenly forces. It has been said that any peaceful & global social revolution, eliminating capitalism & communism alike, capable of really freeing the nations, of leading mankind toward a truly planetary brotherhood & back to a cosmically more correct way of life, must be preceded by the discovery, and appropriate application, of a free energy principle. - Well, as far as we dare judge from the above, we think - THIS IS IT!
